

SCIENTIFIC OUTPUT OF THE BRANCH: FISHERIES MANAGEMENT OF THE DEPARTMENT OF AGRICULTURE, FORESTRY AND FISHERIES

2013

This document lists the scientific output of the Fisheries Management Branch for 2013, arranged by output category. As was the case in the previous two years, the greatest output took the form of **unpublished working group documents** (52 documents), which is consistent with the line function of the research component of the Branch being to provide scientific advice for resource management. There was a marked increase in **contributions to workshops and to management and scientific bodies** – 17 documents, compared with 11 in 2012 and 5 in 2011. This category also represents line-function activity in terms of applied research. The scientifically prestigious category of **peer-reviewed publications** remained steady at 20 papers, compared with 20 in 2012 and 14 in 2011. Seven of those papers were published in the *African Journal of Marine Science*. There were 41 **contributions to symposia and conferences, and public presentations**, nearly half of which (17 presentations) were delivered at the 11th Conference of the Aquaculture Association of Southern Africa (AASA), which was held in Stellenbosch in September.
